Laplace approximation rejected

weak curvature is unresolved by derivative verification.

Original inference coordinates; declared priors included.
No Gaussian posterior or covariance is reported.

Smallest curvature eigenvalue: 0.971
Derivative-verification resolution: 6.22e+03
Condition number: 1.13e+07
Gradient infinity norm: 1.6e-06

3 verification step sizes were attempted.
Checks and target were retained; no jitter was added.

Right: retained, screened NUTS draws.
Chain convergence does not validate local Gaussian curvature.
